COVENANT.

COMPRESSOR / BOOST / EQ

INSTRUCTION MANUAL

[2026]

COVENANT

COVENANT is a dual-stage tone shaper that unites the studio-grade warmth and smooth optical compression of the Teletronix LA-2A, the glassy articulation of a Katana-inspired clean boost, and a powerful Tilt EQ for intuitive tonal sculpting, all in a compact footprint.

OPTICAL COMPRESSOR

Built around the smooth response of optical compression, our circuit offers natural sustain rather than a heavy squeeze, adding a natural lustre and polished sustain to your notes, suitable for any playing style.

The toggle switch provides two distinct characters:

WHITE MODE: Preserves transient detail for a natural feel

YELLOW MODE: Engages a faster attack for tight, percussive funk.

CLEAN BOOST

Inspired by the legendary clean headroom and harmonic push of the Keeley Katana Boost, the boost delivers punchy cleans.

When engaged at higher levels, it can push your amplifier into a smooth, natural breakup with a highly responsive and dynamic feel, rather than an artificial or overly compressed response.

TILT EQ

A post-boost EQ integrated into the compressor circuit, that reshapes your entire tonal spectrum with one intuitive control. Rather than boosting fixed bands, it pivots your overall frequency balance for a smooth, natural shift.

Note:

Clean Blend — Seamlessly mix your dry signal with the compressed path to retain natural transients and dynamics while adding sustain and control, delivering articulate, transparent compression without sacrificing feel.

Toggle Switch:

Flipping the switch engages the pedal into yellow mode.

COMPRESSOR

Level Knob:

Controls the overall output of the pedal.

Blend Knob:

Controls the mix of the dry signal with the compressed signal.

Turning clockwise increases the compressed signal in the mix.

Tilt Knob:

Sets the tonal balance around 890 Hz.

Clockwise: Boosts highs while attenuating lows.

Counterclockwise: Boosts lows while attenuating highs.

Center: Flat, transparent response.

BOOST

Knob:

Controls the overall output on the boost.

Internal Dipswitch:

Left (1): Engages high-gain mode.

Right (2): Activates high-cut filter.

ATTACK:

Flipping the toggle switch up engages the pedal into yellow mode, using a quicker attack to create a tight, punchy funk feel.

SPECIFICATIONS

SWITCHING: RELAY TRUE BYPASS

POWER: 9VDC 2.1mm NEGATIVE TIP

CURRENT: <100mA

DIMENSIONS: 123 x 66 x 58mm

WEIGHT: 350g

WARRANTY

- All pedals are covered by a **1-year warranty** from the date of purchase. This warranty covers manufacturing defects and component failures, including malfunctions related to circuitry, switches, and other components found to be defective. Please note that this warranty **does not cover damage resulting from accidents, misuse, or abuse**. Specifically excluded are:
 - Broken or damaged knobs, pots, and jacks caused by physical impact or mishandling
 - Cosmetic issues such as scratches, chips, or wear to external paint and finishes
 - Malfunctions caused by incompatible or faulty external power supplies
- For warranty service, customers are responsible for shipping costs, except for malfunctions reported **within 10 days of receiving the product**.
- Please contact us with your proof of purchase to initiate a warranty claim.
